Message from the Guest Editor

Changing economic, cultural, and social conditions have contributed to an increase in the number of one-person households, indicating that 13% of all households worldwide were one-person households in 2016. It has been known that living alone is related to a number of negative health outcomes (e.g., diabetes, cardiovascular disease and obesity), increased risk of psychosocial problems (e.g., loneliness and social isolation), and lower quality of life as compared to the counterpart. As the gateway to old adults, middle age is the critical period to live a healthy life both physically and psychosocially. As compared to old adults, middle-aged adults living alone may particularly have poorer health outcomes and a lower quality of life because most health policies focus more on old adults in many countries. Therefore, more attention needs to be paid to this segment of the population, and it is necessary to determine the association between health and quality of life for middle-aged adults so that we can understand what they need and provide a more tailored intervention with middle-aged adults among various age groups living alone.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and many other databases.

Journal Rank: JCR - Q1 (*Public, Environmental & Occupational Health*) / CiteScore - Q2 (*Public Health, Environmental and Occupational Health*)
