Message from the Guest Editors

Alcohol is an established risk factor for a wide range of outcomes. To understand the full epidemiological picture of alcohol use and its consequences, the role and impact of the diverse social determinants and the inequalities related to them must be studied. Not only do social determinants influence alcohol use directly, but there are also several examples where they influence the relationship between alcohol use and health outcomes. For example, the relationship between alcohol use and its various outcomes is more often than not found to differ by sex and gender. Furthermore, the risk relationships between alcohol use and health burden likely differ from one country context to another. However, currently, the bulk of evidence on such relationships is based on a fairly uniform group of western, high-income countries.

Alcohol use and its consequences must be understood in the context of wider social and economic determinants, rather than considering it merely as individual health behavior. The Special Issue is intended to draw attention to the importance of social determinants of alcohol use and its consequences by providing a forum to publish this line of research.

International Journal of *Environmental Research and Public Health*

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and many other databases.

Journal Rank: JCR - Q1 (*Public, Environmental & Occupational Health*) / CiteScore - Q2 (*Public Health, Environmental and Occupational Health*)
