submissions:

**closed (1 October 2021)**

### **Message from the Guest Editors**

Dear colleagues,

We invite contributions derived from applied sociological research on public health issues as well as inquiries using a critical social science lens to tackle normative assumptions. We define critical social science as inquiry calling into question the processes, limitations, and effects of practices that govern people's lives where objectives include contributing to contemporary struggles against social injustice, inequality, human suffering, and oppression. We are interested in evocatively written provocative ideas based on experimental empirical work exploring answers to questions in these areas: occupational health and labour relations; extractive industry and public health; interactions between public health, medicine, and the law; forced (im)mobility and public health; public health practice in Indigenous communities; food or housing insecurity and public health; sociology of public health campaigns.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
