Message from the Guest Editor

Dear Colleagues,

External environmental stimulus such as non-ionizing radiation sources have been reported as triggers of oxidative stress, cell damage, autophagy, and apoptosis. The study of pre-apoptotic activation pathways through caspases in an intrinsic (mitochondrial) or extrinsic (external receptors) way, using in vivo (animal) or in vitro (cellular) models in mammals exposed to sources of electromagnetic fields enables the detection of dysfunctions in programmed cell death, approximating the mechanisms of human pathologies.

A better understanding of the modulation exerted, at molecular level, by non-ionizing radiation in cellular apoptosis, through the study of in vivo and in vitro models in mammals, could have important implications in human pathology and/or therapeutics.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
