Message from the Guest Editors

Dear Colleagues,

In neurodegenerative diseases, both environmental and genetic factors contribute to altering the physiological processes involved in the synthesis of disease-specific proteins, resulting in a protein over-production or in the generation of post-translationally modified protein forms more prone to aggregation. Furthermore, the impairment of intracellular protein catabolic systems plays a crucial role in proteotoxicity, and the prion-like spreading of pathological proteins further amplifies neuronal damage.

A better comprehension of the molecular mechanisms responsible for proteotoxicity in neurodegenerative diseases can allow the identification of both new therapeutic targets and useful biomarkers for these devastating disorders.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
