Message from the Guest Editors

Several groundbreaking innovations, made possible by technological progress, entered the field of cardiac pacing in recent years.

In addition to guideline-directed medical therapy, cardiac resynchronization therapy (CRT) is the cornerstone treatment for selected patients with heart failure (HF). Remote monitoring of cardiac implantable electronic devices (CIEDs) is recommended as part of the individualized multidisciplinary follow-up of HF patients. Although useful in the early detection of CIEDs technical issues, cardiac arrhythmias, and impending HF decompensation, there is still uncertainty regarding its effectiveness in reducing mortality and hospitalizations.

We would like to explore the impact of leading-edge cardiac pacing technologies on patient outcomes including but not restricted to mortality, hospitalizations, quality of life, cardiac remodeling, device- or procedure-related complications, heart failure management, and arrhythmias diagnosis. In this regard, we encourage researchers to submit their work on the following key aspects of cardiac pacing: cardiac resynchronization therapy, conduction system pacing, leadless pacing, and ablate and pace strategies.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Medicine, General & Internal*) / CiteScore - Q1 (*General Medicine*)
