Message from the Guest Editor

In recent years, advances in computer technology have led to dramatic advancements in diagnostic imaging, preoperative simulation, and intraoperative monitoring. In addition, genetic diagnosis and classification of gliomas have been further developed, and thus, outcomes can now be better predicted. Therefore, in order to collate the findings and insights of physicians and researchers and to help them in their future research, we aim to launch this Special Issue which will provide an update of the recent advancements in various aspects of brain tumors.
