Message from the Guest Editors

Dear Colleagues,

In recent years, the research and development of advanced composite materials have focused on areas such as intelligence, green environmental protection, lightweight design, multifunctionality, and nanotechnology to meet the needs of different industries. Therefore, this Special Issue on functional composite materials will extensively cover functional research results such as advanced manufacturing, lightweight design, high strength and rigidity, high thermal conductivity, high hydrophobic interfaces, wear resistance, sensing properties, dielectric performance, self-healing capabilities, and biodegradable and recyclable composite materials. Hence, we sincerely invite experts and experienced researchers engaged in the fabrication and application of functional composites to publish their recent research results in this Special Issue, jointly promoting the development of composite materials science.

Prof. Dr. Jiunn Jer Hwang
