Message from the Guest Editor

Dear Colleagues,

Research into metallic glasses has been ongoing for decades; however, they are still a major focus of world physics and the material science community. Although many scientific issues have already been addressed, several unresolved problems remain, related to glass formation, glass transition, structure, structural dynamics, structural defects, etc.

It is expected that this Special Issue of *Metals* will present valuable contributions to the major topics of research on metallic glasses. Experimental, theoretical, and computational studies on structure and structural dynamics, different types of relaxation, elasticity and anelasticity, plastic deformation, rejuvenation, strength, as well as works on application issues are welcome.

Prof. Dr. Vitaly A. Khonik

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
