**Dr. Jason K. Eshraghian**

Electrical Engineering and Computer Science Department, University of Michigan, Ann Arbor, MI 48104, USA

**Prof. Dr. Herbert Ho-Ching Iu**

School of Electrical, Electronic and Computer Engineering, The University of Western Australia, Perth, WA 6009, Australia

Deadline for manuscript submissions:

**closed (30 December 2022)**

### Message from the Guest Editors

Memristors have shown much promise as a solution for processing-in-memory architectures due to its non-volatile memory retention, high density, low power, nanoscale geometry, and so on. With ongoing advances in material science and device physics, physically-derived and empirically-based memristor models have broadened the ways in which we may design, simulate, and test exotic computing systems and architectures. Furthermore, integrating memristors with modern CMOS processes technology has expanded the spectrum of research on memristive crossbar arrays, digital logic circuits, and in-memory processors, which play an important role in neuromorphic computing systems, novel computing architectures and dynamical memristive networks.

The purpose of this Special Issue on “Novel computing architectures and digital circuit designs using memristors and memristive systems” is to provide a comprehensive overview of memristor fabrication, characterization, and modeling; memristor crossbar arrays, memristor logic circuit designs, processing-in-memory architectures, and other circuit or systems level applications that harness the dynamical properties of memristors.

an Open Access Journal by MDPI

## Editor-in-Chief

## Message from the Editor-in-Chief

You are invited to contribute research articles or comprehensive reviews for consideration and publication in *Micromachines* (ISSN 2072-666X). *Micromachines* is published in the open access format. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Micromachines* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We are pleased to welcome you as our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, dblp, and other databases.

**Journal Rank:** JCR - Q2 (*Chemistry, Analytical*) / CiteScore - Q2 (*Mechanical Engineering*)
