University of Mining and  
Technology, 09599 Freiberg,  
Germany

Deadline for manuscript  
submissions:

**closed (15 December 2023)**

### Message from the Guest Editors

It is estimated that about  $1.0 \times 10^{10}$  kg of oil enters the marine environment each year worldwide. It is essential to understand how microorganisms degrade hydrocarbons in marine ecosystems, as the biodegradation of oil pollution has great potential for the remediation of marine environments. The microbial degradation of marine petroleum pollutants is a complex process, which is constrained by many factors such as petroleum composition and physical and chemical properties, environmental conditions, and microbial community composition. The ecology, physiology, biochemistry, and genetics of oil-degrading microorganisms have been increasingly explored in recent decades.

This Special Issue will collect recent works that address a wide range of research topics listed below:

- (1) microbial diversity and functionality of crude-oil-degrading microorganisms in marine environments;
- (2) metabolic pathways involved in the biodegradation (aerobic/anaerobic) of petroleum hydrocarbons in marine environments;
- (3) recent advances of bioremediation approaches for crude oil contamination in marine environments.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology (medical)*)
