# **Advanced Biotechnology of Microbial Enzymes**

Guest Editors:

#### Prof. Dr. Dietmar Haltrich

Department of Food Sciences and Technology, BOKU University of Natural Resources and Life Sciences, Muthgasse 18, A-1190 Wien, Austria

#### Dr. Daniel Kracher

Institute of Molecular Biotechnology, Graz University of Technology, 8010 Graz, Austria

Deadline for manuscript submissions:

closed (31 July 2021)

## **Message from the Guest Editors**

Microbial enzymes play an integral and important role in a number of different biotechnological applications. Microbial enzymes and, especially, biocatalysis have developed enormously in the last decade and now offer solutions for the sustainable production of chiral and highly functionalized molecules. Recent advances in oxidative enzymes have furthermore boosted research towards biorefineries and biofuels. This enormous progress is based on new approaches for the screening and identification of novel microbial enzymes, various methods to efficiently (over)produce enzymes in an economic way, various techniques to tailor enzymes with respect to desired or novel properties, as well as a wealth of structural data on enzymes. The successful use of enzymes in industry and biocatalysis requires a transdisciplinary expertise, and thus provides a dynamic environment, which will fuel new applications and future innovations. This dynamic interplay between different scientific areas will also be reflected in this Special Issue on the structure, function, and discovery of microbial enzymes, both in traditional fields and in novel industrial applications.

## **Editor-in-Chief**

### Dr. Nico Jehmlich

Department of Molecular Systems Biology, UFZ-Helmholtz Centre for Environmental Research, 04318 Leipzig, Germany

## Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC,

PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Microbiology) / CiteScore - Q2 (Microbiology (medical))
