Deadline for manuscript
submissions:

15 May 2024

Message from the Guest Editor

To evaluate microbiological risk, knowledge of food consumption patterns is essential. Food consumption data are often collected through food consumption surveys designed to obtain epidemiological data on risk factors for chronic diseases or nutritional intake. In the last several years, changes in food consumption patterns have been observed (a preference for raw foods, RTE foods, etc.). It is of great interest to obtain data on the consumption of ready-to-eat foods (RTE) and raw milk or raw fish, among others, especially in high-risk populations. On other hand, storage time, temperature, cooking preferences, and handling and preparation of foods play an important role in food safety.

The aim of this Special Issue is to present research on the effect of food consumption patterns and food handling and preparation at the consumer level on microbiological food safety. Original research articles, as well as review articles, are invited.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology (medical)*)
