Critical Material Recovery from Coal and Coal Byproducts

Guest Editor:

Dr. Aaron Noble

Department of Mining and Minerals Engineering, Virginia Polytechnic Institute and State University, Blacksburg, VA 24060, USA

Deadline for manuscript submissions:

closed (31 August 2022)

Message from the Guest Editor

This Special Issue aims to report recent technological developments and state-of-the-art processing approaches for the extraction of critical materials from coal and coal products. Articles should address one or more coal-based material types, including coal, coal refuse, coal combustion byproducts, underclays and shales, preparation plant products, coal mine drainage, or other similar materials. In addition, articles may focus on the underlying science and/or engineering principles, including geochemical characterization, process development, innovative process circuitry, process waste characterization and remediation, techno-economic and life-cycle analyses, or similar study areas.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef,

CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
