Message from the Guest Editor

Dear Colleagues,

Celiac Disease (CD) and Nonceliac Gluten Sensitivity (NCGS) are the two most frequent conditions belonging to the group of Gluten-Related Disorders (GRDs). Both diseases are triggered and worsened by gluten proteins ingestion, and these affect genetically predisposed individuals. The main prevalence of CD is around 1–2%, and NCGS is much more frequent, estimated at between 5 and 15% of the general population, all over the world.

GRDs are manifested by symptoms of gastrointestinal tract disorders, as well as many others complaints coming from various hematological dermatological endocrinological, gynecological, rheumatological, and nervous-system-associated conditions. The presence of these different extraintestinal processes can appear before or after the diagnosis of CD or NCGS, and may benefit the instauration of a gluten-free diet (GFD)

The current Special Issue, entitled “Celiac Disease and Non-celiac Gluten Sensitivity, Extraintestinal-Associated Conditions: Efficacy of a Gluten-Free Diet” is designed to include articles that will address these issues.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (*Nutrition & Dietetics*) / CiteScore - Q1 (*Nutrition and Dietetics*)

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.
