A well-designed pediatric drug formulation is a vital part of drug treatment. The compliance of (young) children depends heavily on the acceptability of the (oral) formulation, which will in turn be determined by factors such as taste and the texture of the dosage form. Drug safety is also an important issue in pharmacotherapy, and dosage errors can be easily made when a drug formulation is not well adjusted to the patient. In daily practice, extemporaneously prepared drug formulations or manipulation by caregivers are still common practice, and quality issues have to be described. All these aspects have shifted the focus to the development of new drug formulations that are suitable for use in pediatrics, such as 3D printing, minitablets, and oromucosal films. In this issue, new developments are described.

Pharmaceutics (ISSN 1999-4923) is an online open access journal on the science and technology of pharmaceutics and biopharmaceutics. The scientific community, the wider community and the general public have unlimited and free access to the content as soon as a paper is published; this open access to your research ensures your findings are shared with the widest possible audience. Please consider publishing your impressive work in this high quality journal. We would be pleased to welcome you as one of our authors.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (*Pharmacology & Pharmacy*) / CiteScore - Q1 (*Pharmaceutical Science*)
