INRAE/University of Reims  
Champagne-Ardenne, 51100  
Reims, France

Deadline for manuscript  
submissions:

**closed (31 December 2021)**

### Message from the Guest Editors

Lignocellulosic biomass is a key sustainable feedstock to produce materials, chemicals, and fuels replacing fossil carbon resources. However, given lignocellulose chemical and structural complexity, its viable transformation in biorefineries is still not economically optimal. This chemical complexity can also be considered as an advantage because a wide spectrum of biomolecules can be produced from polysaccharides in lignocellulose, bringing innovative properties and a better environmental impact.

Contributions will be articles presenting characterization techniques providing in-depth information on polysaccharide structure, organization, and chemical composition that are critical to optimize lignocellulose valorization. Additionally, applications of polysaccharides from lignocellulose to make various bioproducts are expected, from products designed at the nanoscale (e.g., nano-assemblies, complex biomolecules) to materials (e.g., composites) and commodities (biofuels, bioenergy).

Systems, Graz University of  
Technology, 8010 Graz, Austria

## Message from the Editor-in-Chief

*Polysaccharides* and their derivatives are ubiquitous biopolymers, and therefore in recent years their potential use has increasingly been explored. *Polysaccharides* are still the biggest class of biopolymers used in classical industries such as the paper and textile industry. The progress and fundamental aspects of the new synthesis pathways and derivatization routes, characterization, properties, as well as processing of polysaccharides is important for their possible application in modern sustainable functional materials and future green technologies.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [ESCI \(Web of Science\)](#), [Scopus](#), [FSTA](#), [CAPus / SciFinder](#), and [other databases](#).

**Rapid Publication:** manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.6 days after submission; acceptance to publication is undertaken in 3.9 days (median values for papers published in this journal in the second half of 2023).
