Message from the Guest Editors

Separation and extraction techniques are crucial in both food processing and analysis. Many simple processes are used in food production. More advanced techniques are often used in sample processing for analytical purposes. Developing and optimizing separation and extraction methods are essential for achieving good food quality and reducing production costs, as well as in analytical chemistry to increase laboratory productivity and improve selectivity, precision, and detection. It is also important to develop methods with low environmental impact. Proper control and qualitative and quantitative analysis of food products are critical for food quality and safety, and modern analytical methods allow both the appropriate isolation of food contaminants and their determination.

This Special Issue seeks high-quality works focusing on the latest advances in food processing and analysis. Topics include but are not limited to the following:

- Improved food processing methods characterized by low cost and negligible environmental impact;
- The search for valuable food constituents like antioxidants, etc.;
- The development of green separation and extraction methods.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Processes (ISSN 2227-9717) provides an advanced forum for process/system-related research in chemistry, biology, material, energy, environment, food, pharmaceutical, manufacturing and allied engineering fields. The journal publishes regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Chemical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
