

Remote Sensing of Tectonic Deformation

Guest Editors:

Dr. Chiara Del Ventisette

Earth Sciences Department,
University of Florence, 50121
Florence, Italy

Dr. Guido Luzi

Remote Sensing department,
Technological Centre of
Telecommunications of
Catalunya, Av. Carl Friedrich
Gauss n 7, E-08860 Castelldefels,
Spain

Dr. Oriol Monserrat

Remote Sensing Department,
Division of Geomatics, Centre
Tecnològic de
Telecomunicacions de Catalunya
(CTTC), Av. Gauss, 7 E-08860
Castelldefels (Barcelona), Spain

Deadline for manuscript
submissions:

closed (31 December 2018)

Message from the Guest Editors

Remote sensing data (GNSS, optical data, radar data, etc.) has been proved to be effective in detecting main fault system and in measuring fault-related deformation in the skin-deep of the Earth's crust to describe the nature of active faults and related neotectonic features.

Although remote sensing of faulting and tectonics is a recent development relative to traditional field-based or seismological methods, during the last three decades it has developed from theoretical concept to a technique that is revolutionizing how to study the tectonic deformation.

This Special Issue of Remote Sensing focuses on examining the current and future trends of remote sensing to detect and monitoring tectonic deformation focusing on algorithms, applications, methodologies and case studies. New results, reviews and field measurements at a local and regional scale, and applications to analogue models are welcomed.

All types of original research contributions will be considered.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (*Geosciences, Multidisciplinary*) / CiteScore - Q1 (*General Earth and Planetary Sciences*)
