### Message from the Guest Editors

The aim of this Special Issue is to bring together innovative developments in a broad spectrum of sensors that utilizes textiles as wearable substrates or as an active component of the devices. Both review articles and original research papers are solicited. There is particular interest in papers envisioning innovative sensor applications that have not been possible with conventional rigid materials and form factors.

- E-textiles
- Smart textiles
- Materials and coatings for functional fibers
- Printed electronics/sensors
- Electronic yarns and novel fabric materials
- Technology transfer from fibers to the garment
- Sensor hardware system integration
- Packaging, wearability and user-acceptance
- Reliability, washability and durability
- Energy harvesting and power storage
- Hardware and software co-design
- Wearable healthcare prototypes and applications
- Rehabilitation, sensory monitoring and injury prevention
- Applications to fashion industries
- Internet of Things
- System energy/power management
