Message from the Guest Editors

Dear Colleagues,

Smart cities have transformed how citizens relate to their environment and their city. Technology and the increasingly powerful connection offered by the Internet, as well as the generation and interpretation of data (big data), makes cities optimize their consumption, which translates into taking better care of the environment and reducing pollution. Sensorization has played a fundamental role in the collection of data, which, once analyzed in IoT and smart cities platforms, has allowed for the optimization of multiple decisions in terms of governance and the optimization of resource consumption.

This Special Issue is devoted to promoting the investigation of the latest research in IoT and smart cities and their effective applications, to explore the latest innovations in guidelines, theories, models, ideas, technologies, applications, and tools to assess the impact of the approach, and to facilitate technology transfer. The topics of interest for this Issue can be found on the website.

Message from the Editor-in-Chief

Smart Cities provides an advanced forum for the dissemination of information on the science and technology of smart cities. It publishes reviews, regular research papers (articles) and communications in all areas of research concerning smart cities. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers so that the full experimental results can be reproduced. Manuscripts regarding research proposals and research ideas are particularly welcome.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [Inspec](#), [AGRIS](#), and [other databases](#).

Journal Rank: CiteScore - Q1 (*Urban Studies*)
