A growing stock of evidence backs the pivotal role of biodiversity in supporting the capacity of ecosystems to provide a wide range of ecosystem services. Nevertheless, the relationship between the different levels of biodiversity and the provision of ecosystem services is still poorly defined and assessed. Recent studies indicate that the current global erosion of biodiversity and the degradation of habitats are at the core of serious concerns for the future of human wellbeing.

The capacity of biodiversity conservation and ecosystem services should be considered as non-rival and with interdependent objectives that have to be addressed by management options and policies at all scales. New ideas and results are needed in order to support and promote the role of biodiversity as a key component supporting ecosystem resilience, and as an insurance value for the sustainable provisioning of ecosystem services in socio-ecological systems.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (*Geography, Planning and Development*)
