Message from the Guest Editors

Food and agricultural waste represents a growing problem with negative effects on the economy, environment, and human health. Wine production is a fundamental agricultural activity around the world. This production generates a great amount of wastes, such as grape stalks (stem), grape marc, exhausted yeast, wine lee, and high-loaded wastewater. Winemaking produces byproducts with high added value, which can be used for new productions, opening various possibilities in several application fields. Particular attention should be addressed towards biorefinery and circular economy concepts: wine grape wastes contain bio-based compounds that could have potential benefits. The focus of the proposed Special Issue is the exploitation of the potential role of grape winery waste.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer-reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [Inspec](#), [AGRIS](#), [RePEc](#), [CAPlus / SciFinder](#), and many other databases.

Journal Rank: [JCR - Q2 \(Environmental Sciences\)](#) / [CiteScore - Q1 \(Geography, Planning and Development\)](#)
