### Message from the Guest Editors

Communities of citizens, market parties, and civil society actors are increasingly seen as engines of change in a recent phenomenon of citizen participation in urban developments. These non-traditional players and stakeholders are stepping up in diverse and varied constellations to transform their immediate environments with their communities. This phenomenon has challenged how conventional planning power structures and hierarchies might adapt to the dynamic and ever-changing needs of citizens and market parties in search of livability, wellbeing, and sustainable development. This special issue invites submissions that discusses and challenges who make up these communities, which aspects of social learning and innovation are at play and what are the boundaries that needs to be considered for co-creating and co-designing community-linked sustainable urban developments.
