Message from the Guest Editors

Dear Colleagues,

Innovation plays a key role in organizational survival and growth in the food industry due to its specific nature. As such, in addition to the need to sustain innovation management, the food sector also needs to focus on sustainability, given the impact that food production and waste have on the environment, local economies, as well as on consumers' health and wellbeing.

This Special Issue invites academic articles that contribute to our knowledge and understanding of sustainable innovation management within the food industry, including but not limited to the topics below:

Technological food innovations and their role on sustainability;

Sustainable strategic innovation and/or business model innovation;

Green innovation;

Sustainable incremental and radical innovations;

Sustainable innovative management practices and processes;

Sustainable innovation and organizational performance;

Design-driven innovation and sustainable development.
