Message from the Guest Editors

Over the past few decades, the increased frequency, magnitude, and extent of wildfires have become a major societal and environmental concern across the world. Therefore, post-fire treatments to limit the potential for soil erosion are increasingly important.

This Special Issue intends to outline different approaches regarding post-wildfire management, showing the different perspectives and challenges in the 21st century. As this is a crucial issue for sustainable development, strongly threatened by global changes, and since the production of literature today is fast and dispersed by countless theses, books, and articles, a Special Issue may gather the most recent results obtained in research in different regions around the globe. Topics include but not limited to:

- Wildfire impacts on soil and vegetation;
- Soil erosion, land degradation after wildfires
- Short-and long-term post-fire vegetation recovery
- Soil erosion, land degradation analysis
- Vegetation recovery analysis, after wildfires, based on remote sensing data, GIS or GPS
- Assessment of burned forest area severity and post-fire regrowth using remote sensing data
- Post-fire management practice
- Soil restoration

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Applied Science, University of
Ontario Institute of Technology,
Oshawa, ON L1G 0C5, Canada

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, AGRIS, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Geography, Planning and Development)
