Message from the Guest Editors

The term sustainable building refers to both a structure and the utilization of processes that are environmentally responsible and resource-efficient throughout a building's life-cycle: planning, construction, operation, maintenance, renovation, and demolition. An increasing number of researchers are developing new ecological technologies, materials, and methods that are accessible, secure, healthy and productive while minimizing any negative impacts upon society, the environment and the economy. Accordingly, some specialists such as landscape architects, architects, engineers, urban designers and planners play a significant role in achieving sustainable development in cities and countries and in creating appropriate conditions for a higher quality of life.

From this perspective, the Special Issue wants to contribute to the field, presenting the most relevant advances in this research area.

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE](#) and [SSCI \(Web of Science\)](#), [GEOBASE](#), [GeoRef](#), [Inspec](#), [AGRIS](#), [RePEc](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (*Geography, Planning and Development*)
