Deadline for manuscript  
submissions:

**closed (31 August 2023)**

### Message from the Guest Editors

Dear Colleagues,

Fixed-point theory is one of the most flourishing areas of research in nonlinear analysis that has enjoyed rapid development over the years and has continued to attract the interest of many authors due to its many applications in diverse mathematical problems, such as variational inequalities, equilibrium problems, split feasibility problems, and so on. The aim of this Special Issue is to collect papers containing very recent results in fixed-point theory in correlation with the symmetry concept and related topics, which will be useful and helpful for researchers working in these areas. This Special Issue will accept for publication high-quality research papers on fixed-point methods and related topics.

Please note that all submitted papers must be within the general scope of the *Symmetry* journal.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q2 (*Multidisciplinary Sciences*) / CiteScore - Q1 (*General Mathematics*); Q1 (*Physics and Astronomy*); Q1 (*Computer Science*)
