Deadline for manuscript submissions:
closed (1 February 2022)

Message from the Guest Editors

Dear Colleagues,

Effective decision-making in construction projects is crucial both at the macro- and at the microlevel. Decision-making also entails managing a large number of varied risks, which are always present regardless of the stage or level of the project's development.

This Special Issue aims at presenting recent developments at all stages and in all aspects of the decision-making process for construction projects, both at the theoretical and practical levels. These aspects include—but are not limited to—the following issues, which are most welcome in this Special Issue: Construction methods: Selection and application; Technological advances in data collection and processing in construction; Building information modeling applications for risk management and decision-making; Risk management etc.

For further information about the topics of interest, please visit: mdpi.com/journal/systems/special_issues/DMCP

Chair, Department of Systems and Information Engineering, University of Virginia, Charlottesville, VA 22904, USA

Message from the Editor-in-Chief

Systems is a leading venue for the quick and global dissemination of results of cutting-edge research in various areas of systems science and systems-related fields. An increasing number of researchers are realizing the enormous potential of systems thinking in managing the many unprecedented and complex issues in all areas of need. The *Systems* journal provides a home of exceptional quality for the manuscripts of these researchers who often find it difficult to publish their work in conventional discipline focused journals.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SSCI (Web of Science), dblp, and other databases.
Journal Rank: JCR - Q2 (*Social Sciences, Interdisciplinary*) / CiteScore - Q2 (*Modeling and Simulation*)
