Message from the Collection Editor

Dear Colleagues,

Poisonous plants, and the toxins they produce, result in major economic losses to livestock industries throughout the world. Several of these plants are also toxic to humans. The toxic components of many of the more problematic poisonous plants are alkaloids. There are numerous classes of alkaloids, grouped by chemical structure, including pyrrolizidine, piperidine, pyridine, indole, quinolizidine, indolizidine, diterpenoid, tropane, and steroidal alkaloids. In this Special Issue, various aspects of the toxicity of numerous alkaloids from plants will be discussed. This Special Issue welcomes contributions of both reviews and original research on the toxicity of natural alkaloids, especially alkaloids produced by plants.

Message from the Editor-in-Chief

Toxinology is an incredibly diverse area of study, ranging from field surveys of environmental toxins to the study of toxin action at the molecular level. The editorial board and staff of *Toxins* are dedicated to providing a timely, peer-reviewed outlet for exciting, innovative primary research articles and concise, informative reviews from investigators in the myriad of disciplines contributing to our knowledge on toxins. We are committed to meeting the needs of the toxin research community by offering useful and timely reviews of all manuscripts submitted. Please consider *Toxins* when submitting your work for publication.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**, **SCIE (Web of Science)**, **PubMed**, **MEDLINE**, **PMC**, **Embase**, **CAPLus / SciFinder**, **AGRIS**, and **other databases**.

Journal Rank: JCR - Q1 (*Toxicology*) / CiteScore - Q1 (*Toxicology*)
