Message from the Guest Editors

Cereals are affected by various viruses, which are the most difficult pathogens to control since once a viral disease has established on a field, there are no means by which it can be eradicated. Many countries are addressing this challenge and are making important contributions to virology research over the years. Looking for high-quality science developed in the face of unique challenges, we encourage researchers to submit articles to this Special Issue entitled “State-of-the-Art Cereal Virus Diseases in Asian and European Countries.”

This Special Issue’s goal is to publish research studies that address efforts for cereal virus diagnosis, diversity of virus population, host resistance, transmission, prevention and control in Asian and European countries. Investigations on pathogenesis of virus infection are also welcome, as well as relevant epidemiological findings. Both original manuscripts and reviews are welcome.

Deadline for manuscript submissions:

31 March 2022

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Author Benefits

Open Access:— free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, AGRICOLA**, and many **other databases**.

Journal Rank: **JCR - Q2 (Virology) / CiteScore - Q2 (Infectious Diseases)**
