**22 December 2021**

### Message from the Guest Editor

More than simply supplanting any other health topic on the list of public health concerns, SARS-CoV-2 has been completely redesigning the present and future of Vector-Borne Diseases (VBD).

The COVID-19 situation may provide new insights into VBD prevention, surveillance, and diagnostics, as well as a higher acceptability of innovative solutions, such as RNA vaccines, Point-Of-Care molecular methods to detect RNA viruses, mobile-based tracing of infected cases, biological surveillance of travelers, to name a few. Such innovative strategies implemented with the hope of quickly winning the battle against COVID-19 might become durable solutions to prevent and manage VBD outbreaks; however, such innovative solutions are often expensive and impractical, thus increasing the gap between high- and low-income countries. For this reason, low-cost strategies for VBD surveillance and vector-control in low-resources settings are of great importance.

## Editor-in-Chief

### Dr. Eric O. Freed

Director, HIV Dynamics and Replication Program, Center for Cancer Research, National Cancer Institute, Frederick, MD 21702-1201, USA

## Message from the Editor-in-Chief

*Viruses* (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

## Author Benefits

**Open Access:**— free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within **Scopus**, **SCIE (Web of Science)**, **PubMed**, **MEDLINE**, **PMC**, **Embase**, **AGRICOLA**, and many **other databases**.

**Journal Rank:** **JCR - Q2 (Virology)** / **CiteScore - Q2 (Infectious Diseases)**
