Development of New Tools and Techniques for Aquatic Monitoring and Conservation

Guest Editors:

Prof. Dr. Vladimir Pešić

Department of Biology, University of Montenegro, Cetinjski put b.b., 81000 Podgorica, Montenegro

Prof. Dr. Andrzej Zawal

Institute of Marine and Environmental Sciences, Center of Molecular Biology and Biotechnology, University of Szczecin, Wąska 13, 71–415 Szczecin, Poland

Deadline for manuscript submissions:

31 May 2024

Message from the Guest Editors

Dear Colleagues,

In recent times, there has been a continuous trend of improving tools and methods for the conservation of aquatic ecosystems. A large number of traditional tools and techniques of aquatic monitoring and conservation, rooted in fundamental ecology, are continuously being supplemented with methods and practices from other disciplines such as genetics, oceanography, limnology and a wide range of social sciences. An integrative approach is often highlighted as needed to address the growing challenges facing aquatic ecosystems. This Special Issue will cover a wide range of topics, from global threats to biodiversity such as habitat destruction or degradation, overexploitation, species invasion and water pollution, to specific threats to particular habitats such as groundwater-dependent ecosystems and the interstitial environments that are largely neglected in both recent scientific studies and in management plans for aquatic ecosystems conservation.

Scientifique (CNRS), University of
Toulouse, Campus ENSAT,
Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
